Framing, in construction, is the fitting together of pieces to give a structure support and shape. Framing materials are usually wood, engineered wood, or structural steel. The alternative to framed construction is generally called mass wall construction, where horizontal layers of stacked materials such as log building, masonry, rammed earth, adobe, etc. are used without framing.

Timber framing and "post-and-beam" construction are traditional methods of building with heavy timbers,

creating structures using squared-off and carefully fitted and joined timbers with joints secured by large wooden pegs. It is commonplace in wooden buildings from the 19th century and earlier. If the structural frame of load-bearing timber is left exposed on the exterior of the building it ...

Timber framing - Wikipedia

This article describes and illustrates common building framing materials used in different epochs of residential construction. Knowing when certain materials were first or last in common use can help determine the age of a building.
