In object-oriented programming, inheritance is the mechanism of basing an object or class upon another object (prototype-based inheritance) or class (class-based inheritance), retaining similar implementation. In most class-based object-oriented languages, an object created through inheritance (a "child object") acquires all the properties and behaviors of the parent object (except ...

Human genetics is the study of inheritance as it occurs in human beings. Human genetics encompasses a variety of overlapping fields including: classical genetics, cytogenetics, molecular genetics, biochemical genetics, genomics, population genetics, developmental genetics, clinical genetics, and genetic counseling. Genes can be the common factor of the qualities of most human-inherited traits.

Interfaces alone are not a substitute for multiple inheritance. This is because extending an established interface breaks all implementors. huge issue. To (partially) work around this, code your methods & properties into a separate POCO object class, make an interface with just ONE property, of that class, that forces the implementor to expose all its functionality.

Joubert syndrome and related disorders may be caused by changes (mutations) in any of many genes (some of which are unknown). The proteins made from these genes are either known or thought to affect cell structures called cilia. Cilia are projections on the cell surface that play a role in signaling. They are important for many cell types, including neurons, liver cells and kidney cells.
