Drugs and alcohol contribute to the death of approximately 90,000 Americans annually. With the use of  
Marijuana, alcohol, and other drugs on the rise, dental professionals are at the front lines of recognizing  
addiction and the oral and systemic effects on patients.

Dental radiographs are commonly called X-rays. Dentists use radiographs for many reasons: to find hidden  
dental structures, malignant or benign masses, bone loss, and cavities.. A radiographic image is formed by a  
controlled burst of X-ray radiation which penetrates oral structures at different levels, depending on varying  
anatomical densities, before striking the film or sensor.

Magnetic resonance imaging (MRI) is a medical imaging technique used in radiology to form pictures of the  
anatomy and the physiological processes of the body in both health and disease. MRI scanners use strong  
magnetic fields, magnetic field gradients, and radio waves to generate images of the organs in the body. MRI  
does not involve X-rays or the use of ionizing radiation, which distinguishes ...
