Laser beam welding (LBW) is a welding technique used to join pieces of metal or thermoplastics through the use of a laser. The beam provides a concentrated heat source, allowing for narrow, deep welds and high welding rates. The process is frequently used in high volume applications using automation, such as in the automotive industry. It is based on keyhole or penetration mode welding.

Laser beam welding - Wikipedia

Plasma arc welding (PAW) is an arc welding process similar to gas tungsten arc welding (GTAW). The electric arc is formed between an electrode (which is usually but not always made of sintered tungsten) and the workpiece. The key difference from GTAW is that in PAW, by positioning the electrode within the body of the torch, the plasma arc can be separated from the shielding gas envelope.

Brazing-steel is generally easy to perform with the proper consumables and processes.. One should have a good understanding of the basics, see Brazing.. One should pay attention to the fine details of Brazing Joint Design and of proper gap clearance.. Furthermore one should select a suitable heating method depending on the production quantities involved.

Brazing-steel easy application for high performance joints

Its appropriate for anyone. Absolutely, especially to understand how cutting tool profiles work. I use a 1940s version of Audels Machinists Handbook, it STINKS to high heaven, and its a "bible."
